

Quick Guide : Loading KSP Scripts into Kontakt

You will need a full license of NI Kontakt ; you cannot edit Kontakt Player patches in this way.

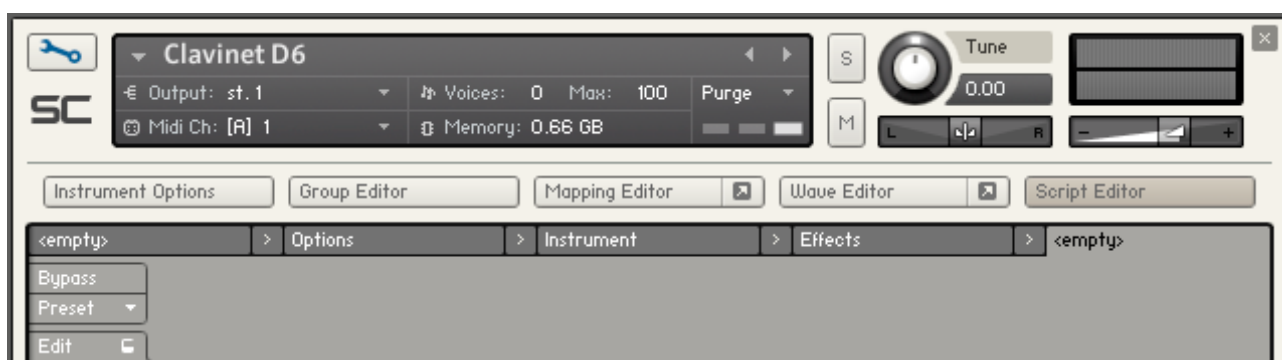

Copy the script (.nkp file) to :

User/ Documents/ Native Instruments/ Kontakt 4 or 5/ Presets/ Scripts

Open a Kontakt instrument (.nki) in edit mode, by clicking the Wrench icon shown below

Open the Script Editor, and click on the last tab on the far right , pictured below :

Go to the Script Editor preset menu, and navigate to the User section. You should see your recently added script there. Select it to load.

You can now save the Kontakt instrument (.nki) as a new version, and it will load with the script already in place.
